

ETHEKWINI MUNICIPALITY AND THE UNIVERSITY OF KWAZULU –NATAL

On the 9th of May 2015, the University of KwaZulu –Natal hosted their annual Open day.

The school of Agriculture, Engineering and Science invited the Human Settlements, Engineering Services & EThekweni Transport Cluster, and Trading Services Clusters: Support Services Office under the Deputy City Manager's Office.

The day was aimed at exposing learners, alongside their guardians and parents to the fields of study that exist in the School of Agriculture, Engineering and Science - UKZN.

The Support Services Office made learners aware that EThekweni Municipality's program in STEM - Science, Technology, Engineering and Mathematics is committed to supporting Top Matric achievers in Mathematics and Science.

This gave both learners and parents' insight on the many opportunities available from the EThekweni Municipality for them to pursue a future career in Engineering, without the financial burden to parents and reassurance of employment, through internship and graduate programs in the EThekweni Municipality –Engineering Unit in the City.

The Support Services representative encouraged learners to persevere and strive for excellence in their academic subjects especially in Mathematics and Science, to have confidence in gaining first preference in the University of KwaZulu –Natal to study Engineering in the school of Agriculture, Engineering and Science.

Academic Institutional Open Days that collaborate with the EThekweni Municipality have immense impact on learners and their parents for both to gain insight and expand their knowledge on the initiative available from the EThekweni Municipality .
